

**A REALLY AWESOME UNIVERSITY**  
**GUIDELINE-COMPLIANT THESIS**

*by*

Your Name

Submitted for the degree of  
Doctor of Philosophy

INSTITUTE OF PHOTONICS AND QUANTUM SCIENCES  
SCHOOL OF ENGINEERING AND PHYSICAL SCIENCES  
HERIOT-WATT UNIVERSITY

February 2021

The copyright in this thesis is owned by the author. Any quotation from the report or use of any of the information contained in it must acknowledge this report as the source of the quotation or information.

# Abstract

Write the abstract here.

In accordance with the Academic Regulations the thesis must contain an abstract preferably not exceeding 200 words, bound in to precede the thesis. The abstract should appear on its own, on a single page. The format should be the same as that of the main text. The abstract should provide a synopsis of the thesis and shall state clearly the nature and scope of the research undertaken and of the contribution made to the knowledge of the subject treated. There should be a brief statement of the method of investigation where appropriate, an outline of the major divisions or principal arguments of the work and a summary of any conclusions reached. The abstract must follow the Title Page.

Thesis guidelines can be found at:

<https://www.hw.ac.uk/uk/students/doc/guidelinesonsubmissionandformatofthesis.pdf>

**The Introduction Chapter gives some more details, and provides an introduction to the features contained in this template**

*Disclaimer and Statement of Intent* - This is an unofficial LaTeX template, updated by me, Alex. I am not an expert, so there may be small issues, but I have tested this offline in TeXworks, and online in Overleaf and it works in both those cases. I just did this to be nice, the spirit of education should encourage us all to help each other, even in the small ways. If this helps you save time and some annoyance, maybe think about some way you could make another person's life a little easier? As David Graeber put it: '*the ultimate, hidden truth of the world is that it is something that we make, and could just as easily make differently.*'

# Acknowledgements

You can write whatever you want to in the Acknowledgements, I have seen thanks to videogames, rubber ducks, takeaway restaurants, Karl Marx and so on. Some people even go as far as to put down things or people that got in the way of their thesis. If you consider going that route, keep things civil! Still, this is your space, there's no real guidelines, include a fancy quote then several paragraphs about ghosts if you like, or maybe a poem that speaks to you. Have a think about it.

After this comes the mandatory table of contents.

## **Lists of Tables and Figures, Glossary, List of Publications by the Candidate**

It is *optional* to provide these lists. If provided, then they should start on the page following the table of contents and be in the order: Tables, Figures, Glossary (list of abbreviations), Publications.

Items in lists of Tables and Figures should be in the order in which they occur in the text.

**lol** laughing out loud

**Optional** Including a list of used terms/acronyms is totally optional

**WYSIWYG** What you see is what you get

# Chapter 1

## Introduction

### 1.1 Thesis Structure Details

For the Degree of Doctor of Philosophy the thesis shall not normally exceed 80,000 words and shall not normally exceed 400 pages in length including Appendices, with a limit of no more than 100,000 words. In exceptional circumstances, the Research Degrees Committee will consider requests for thesis exceeding 100,000 on a case by case basis. The number of pages of a thesis exceeding 80,000 words in length shall be increased on a pro rata basis in accordance with the word limit. For the Degree of Doctor of Philosophy by Published Research, a critical review of the published research which shall be in the range of 10,000 to 25,000 words must be submitted.

Chapter 1 of the thesis must be an Introduction, so headed, defining the relation of the thesis to other work in the same field and referring appropriately to any findings, propositions or new discoveries contained in the thesis and to any important points about sources or treatment.

Thesis guidelines can be found at:

<https://www.hw.ac.uk/uk/students/doc/guidelinesonsubmissionandformatofthesis.pdf>

Related documents and forms at: <https://www.hw.ac.uk/uk/students/studies/examinations/thesis.htm>

### 1.1.1 Layout details

In the main tex document `HWThesis.tex` the margins are set, and the left margin is larger than the right one. This is because the PhD thesis you submit will be printed one-side rather than double sided. So in any two spread the printed page will be the one on the right hand side. Therefore, the left side of every page will connect to the thesis binding, so you need an extra large margin to make sure none of your images or text are hidden by the binding.

#### 1.1.1.1 Paragraph indentation

- I have turned off the LaTeX default of having the first line of each paragraph be indented. If you want to turn that back on, simply go to the preamble in `HWThesis.tex` and comment out the line `\usepackage{parskip}`.

## 1.2 Template Structure

This LaTeX template is for you to have the format generally laid out, and an example structure. The main file is `HWThesis.tex`, that defines the title page, layout, packages, and a few other pieces of information. The file tree is set up for a long project, with a few folders. A **Figures** folder for all your figures, then a **Chapters** folder to keep the tex files for each chapter. This is just so you don't accidentally make one massive tex file where it gets really really difficult to correct LaTeX mistakes for example. You can change this structure if you'd like, for example with a different figures folder for every chapter.

I have also tried to make this structure modular. For large Theses, if they have lots of images, it can take a long time for them to render, but you are likely only wanting to update one chapter or appendix at a time. So I have introduced the `subfiles` package.

### 1.2.1 subfiles

The subfiles package allows you to render individual subdocuments within a larger document, keeping all the functionality from the main document intact. You can see how I have done this in `HWThesis.tex` where the introduction is added with the `subfile` command, rather than `input` or `include` command. Then each chapter just begins with one line of text

`documentclass[../HWThesis.tex]{subfiles}`, and has `begin{document}`, `end{document}` around the rest of the chapter.

#### 1.2.1.1 What is the advantage?

With this, you can work on each chapter in isolation, and not worry about massively long typesetting times, or breaking the rest of your LaTeX document. The main thing that might not work is the citation numbering. this is done at the end of a document, so won't show the numbers correctly unless you are printing out the bibliography for each chapter at the end of each chapter, or render `HWThesis.tex`.

## 1.3 What other features are in this template?

### 1.3.1 References and hyperref

With a bibliography set up properly, using Zotero, Mendeley, any standard reference manager or BibItems, we can simply cite papers [2].

We can also reference prior sections, for example you might want to see 1.1 for specifics on how to set up a thesis. These links should be clickable in the pdf thanks to the `hyperref` package. These links **will not** show up when printing, they are digital only. If you want to make them printable, you can do that with the help of the documentation.

### 1.3.2 Colors

You may want to even change the color of text when working on it, you can do that like this **there are some colors that are already named in `graphicx`** but you can also define your own. **So now I have a specific light blue color, very nice.** You may want to have colours to highlight sections you are working on, but text needs to be black when you submit!

### 1.3.3 Acronyms, via `acro`

This thesis comes set up with acronyms so you can define terms you use repeatedly and make sure they're formatted correctly every time. A simple acronym is What you see is what you get (WYSIWYG), as this is the first time it is used in the thesis, we get the long version, with the short version following it in brackets. Now it has been used once, we can now simply write the acronym command `ac{wys}` again and we will just get the shortened version. Unlike  $\text{\LaTeX}$ , Microsoft Word is a WYSIWYG typesetting program.

These acronyms have to be defined in the preamble of `HWThesis.tex`. You will want to use these when you just don't want to have to type out a term over and over again, or you can invoke long and hard to spell terms like bacterial names, specific pieces of hardware used in experiments, or even lengthy phrases. This document is set up to include a page that lists used terms. Including a list of used terms/acronyms is totally optional.

Of course you can choose whether you want the long or short version of an acronym at any point, here is a quick summary of options:

first	<code>ac{lol}</code>	laughing out loud (lol)
second	<code>ac{lol}</code>	lol
long	<code>ac1{lol}</code>	laughing out loud
short	<code>acs{lol}</code>	lol
full	<code>acf{lol}</code>	laughing out loud (lol)

This is a very versatile package that saves time and lets you say the important

things, whether that is Join a Union (JAU) or How much wood would a woodchuck chuck if a woodchuck could chuck wood? (HMWWAWCIAWCCW)

## 1.4 Symbols

Top tip, if you are struggling to remember the name of a  $\text{\LaTeX}$  symbol you need, maybe play around with `detexify`, where you can draw a symbol, and it will try and find a matching one in  $\text{\LaTeX}$ : <https://detexify.kirelabs.org/classify.html>

### 1.4.1 Maths

As a physicist I have included a few packages for maths, these should be standard enough

$$e = \sum_{n=0}^{\infty} \frac{1}{n!} = 1 + \frac{1}{1} + \frac{1}{1 \cdot 2} + \frac{1}{1 \cdot 2 \cdot 3} + \dots \quad (1.1)$$

An important note here - Thesis guidelines say every equation that appears on its own line, needs an associated number, even if you don't refer to it. So  $2 = \sum_i^{\infty} 2^{-i}$  would not need a number, but the above equation does. I also added in a different fraction option with  $\frac{1}{2}$  as compared to the standard  $\frac{1}{2}$ . Up to your personal preference.

### 1.4.2 SI Units via `siunitx`

The SI unit package is also include, one of the more common usages is to have a proper command for the degree symbol, for example 10 degrees becomes  $10^\circ$ . However the package also includes a lot of functions for using units like grams, candela, moles, electronvolts etc with numbers, so that the unit levels look the same whether in text mode or math mode. If you write a lot of units, maybe look into the documentation.

**That is everything, the following chapters show some example plots, tables, and then an appendix with details on how an appendix should be set up.**

### 1.4.3 Subfigures and Subcaptions

I have both of these in the header for the main `HWThesis.tex` but I have not bothered to test them, play around at your own risk, I don't really like either package honestly.

## 1.5 Logos

Last last thing, I have included a new university crest for the title page, but you may want an alternative. Here I will quickly show you the ones I have included. You can then choose exactly which one you would like on your title page!

Figure 1.1: The default `HW_shield`, that I cropped from the full logo svg

Figure 1.2: The black HW\_shield.pdf, that I also cropped from the full logo svg

Figure 1.3: The JPEG HW\_logo from the intranet

Figure 1.4: Lastly... the black JPEG HW\_logo from the intranet.

# Chapter 2

## Background

Figure 2.1: Figure Caption.

[3, 1]

**2.0.1 Subsection**

Case	Method#1	Method#2	Method#3
1	50	837	970
2	47	877	230
3	31	25	415
4	35	144	2356
5	45	300	556

Midnight	7	-3	5	3	-1	-3	5
News	9	-3	7	9	-5	-1	9

Table 3.1: Table Caption

#### 3.1.1.1 Subsubsection

## Chapter 4

### Conclusion and Future Work

# Appendix A

## Foo

Hi I'm an appendix

Appendices, labelled A, B etc., should be treated as additional chapters and should normally follow the main text. Appendices may consist of supporting material of considerable length or of lists, documents, commentaries, tables or other evidence that if included in the main text, would interrupt its flow. The style of appendices must be consistent with the style of the main text. Long appendices may be divided into sections, labelled as Appendix A.1 etc., with corresponding subsection numbering, which must be entered in the table of contents. Alternatively, short appendices may be attached to individual chapters, as an extra section with a heading of style 3.7 Appendix.
